

Abstract of the Disclosure:

Wafer products are produced with two or more wafer sheets and food product in between. The food product, for instance confectionery, meat, fish, cheese, fruit or vegetable product
5 or the like, nuts, or almonds, is applied to a first wafer sheet delivered still hot from the oven. The wafer sheet contains at least 23% sugar or an identical portion of a substance with the same technological properties as sugar, such as trehalose. A second, still-hot wafer sheet is applied
10 to the first layer, the second wafer also containing at least 23% sugar or an identical portion of a substance with the same technological properties as sugar. The two wafer sheets containing the layer of the food product are joined to each other by pressing.
